

Hikvision - LoopSign Deployment Guide

Deployment of LoopSign to your Hikvision display is very easy. LoopSign utilizes its Android app on Hikvision's custom Android OS to play content.

Connecting the display to ethernet is always highly recommended, but wifi connections will usually work as well, given a strong and stable wifi connection.

| 2. | . Connect to network | 2 |
| 3. | . Install the LoopSign Player app | 3 |
| | 3.1 Install the LoopSign Player app | 3 |
| | 3.2 Set LoopSign Player to run at startup | 4 |
| 4 | Set date/time and schedule settings | 5 |
| | 4.1 Set date/time settings | 5 |
| | 4.2 Set scheduled on/off of the display | 5 |
| 5 | Open the LoopSign Player app | 6 |
| 6 | Enroll the display on your LoopSign account | 7 |

1. Dismiss/disable FocSign

After turning on the display for the first time, a notification will pop up asking to activate FocSign. Check the "Ignore" checkbox and click "Next Time".

2. Connect to network

Connect to network (ethernet highly recommended) via the Settings app.

| Settings | | Network | |
|--------------------|------------------|--------------|---|
| Wetwork | Wired Network | Disconnected | > |
| Display | Wireless Network | Disabled | > |
| ⊲ » Audio | Hotspot | Disabled | > |
| App Management | Bluetooth | Disabled | > |
| Storage Management | | | |
| Security | | | |
| System | | * | |
| Advanced Settings | | | |

3. Install the LoopSign Player app

3.1 Install the LoopSign Player app

Download the LoopSign Player app to your computer and put it on a memory stick (FAT32 recommended) which you can connect to the screen.

Download link: <u>https://loop24.no/lspdm.apk</u>

Connect the memory stick to the display and use the FileBrowser app to navigate to and run the APK installation file. Click "Done" when finished.

| CAN LoopSign Player bo you want to install this application? | NCEL INSTALL | |
|--|--------------|--|
| CoopSign Player App installed. | DONE OPEN | |

3.2 Set LoopSign Player to run at startup

Open the Settings app and go to "App Management" \rightarrow "Run at Startup". Activate "Run at Startup" and select "LoopSign Player".

| Settings | App Management | |
|--------------------|-------------------------------|-----|
| Network | Run at Startup | > |
| Display | Default App | > |
| Audio | Show Apps/Show System Process | |
| App Management | LoopSign Player 416 MB | > |
| Storage Management | AM Player 10.49 MB | > |
| Security | FileBrowser 209 kB | > |
| System | FocSign Editor 61.44 kB | * > |
| Advanced Cettings | FocSign Player 250 kB | > |
| Exit | | |

4 Set date/time and schedule settings

4.1 Set date/time settings

Make sure that the date/time settings of the screen are correct. Open the Settings app, go to "System" \rightarrow "Date and time", and then check that the settings are correct. (NTP sync recommended.)

| 12:16 🔲 🖨 🤹 🕻 | | | | | • |

| | Advanced Settings | Legal Information | | > | |
| | Exit | | | - | |

4.2 Set scheduled on/off of the display

Open the Settings app, go to "Advanced Settings" and activate "Scheduled Startup/Shutdown". Then open "Startup/Shutdown Settings" and set your preferred schedule(s).

| | Settings | Advanced Settings | |

5 Open the LoopSign Player app

Open the LoopSign Player app from the app menu (or simply reboot the display to have it autostart). Use the unique hash code shown on the screen to enroll the display to your LoopSign account and show your content.

6 Enroll the display on your LoopSign account

Log in to LoopSign, and then click *Manage Screens*. After that, click *Devices* in the top menu. In the Devices overview, click *+Enroll* to add the display to your LoopSign account, using the hash code showing on the display. After that you can assign the display to a LoopSign screen to immediately have your display start playing your LoopSign content.
